THE REDCLIFF REVIEW. WEDNESDAY MARCH 20, 1940

Number 86

COMMON SENSE IS DRIVING SOCIAL CREDIT OUT

Because We Want Action Not Talk!

For five years, we have had men who wasted time talking and promising. Today we want action. Thursday night, Dr. Robinson said he was making no promises he could not keep. He told us the same thing in 1935. Bill Yuill says "Let's stop talking; Let's do something about Alberta's problems."

Because We Want Busy Plants

Aberhart's policies have meant that there has been no building under the Dominion Housing Act. That's why the brick plants are not busy. There has been some improving and repairing done under The Home Improvement Act, but no building of new homes. Aberhart lost us our share of the \$20,000,000 spent for Canadian housing under the Dominion Housing Act.

Because Aberhart Increased Compensation Dues

Workers' payments to the Workmen's Compensation Act have gone up without any added benefit to the worker who foots the bill. Bill Yuill says that benefits must be maintained and, if possible, cost to worker reduced.

Because We Want Lower Taxes

Waste, extravagance and negligence of the government have boosted taxes. Nobody disputes that taxes have gone up. We are paying for this increase. Bill Yuill says cut out the waste and taxes will come down.

Because Health Grants Have Been Reduced

The government could buy the premier a \$5,000 car but it had to reduce grants to hospitals and travelling clinics. Bill Yuill says that it is time that we had an energetic health policy.

Because - Aberhart Neglects the Soldiers

Aberhart had to choose between having a quick election and giving our soldiers outside of the province a chance to vote. His decision was against the soldiers. A government which shows lack of sympathy for soldiers is not the government to find jobs for them when they return. Bill Yuill says we've got to start planning for their return now.

Because - We Want Our Debt Refunded

The Aberhart government rejected a LEGAL plan to refund our debt at 2.50 per cent in favor of an UNLAWFUL plan at a higher rate. Bill Yuill favors refunding at as low a rate as possible.

Because - Aberhart Deals In Rumors

Rumor spread that Bill Yuill is opposed to Minimum Wage is false. Anybody who knows Bill Yuill knows that he favors the Minimum Wage. Ask the men who work with him.

Because - We Want A Road Policy!

After five years we got a road to Medicine Hat. Credit for the road should be shared among Councils of Medicine Hat and Redcliff, Provincial and Dominion governments. Dr. Robinson claims all the credit. The electors know better.

YUILL, WILLARD CLINTON

of the City of Medicine Hat, Assistant Superintendent

Inserted by Medicine Hat Social Credit Constituency Association.

JOHN SMITH SAYS:

Well, folks, I guess the issue if there was one, is pretty well decided. We're going in behind that screen on Thursday and we are going to put the 1 right after Doc Robinson's name... We are going to send him up to Edmonton and tell him, "Go ahead with your program Doc we are all right behind you." Yes Sir, that's where we are. Right behind the man we know has our interests in his heart... We haven't had a man like the Doc before and we don't want to lose him. A lot of the big moguls around here would though. And we have a pretty good idea what would happen if they had all, the say. We know what they did before we voted for the Doc. Two bits an hour was good enough for us, so they thought. If we put this Independent fellow in there we will be right behind the Right Ball.

In the past, if there was anything wrong in Compensation payments or the like, it was just a case of call the Doctor. And I mean Doctor Robinson. Doc would get things done quicker than you could say Jack Robinson. We know it will be that way if we support Doc. Personally, I think too much of my little family to take any chances. I am sure going to put that 1 right after Doc Robinson's name. There is nothing "high and mighty" about the Doc. He is always ready to lend a sympathetic ear to our troubles. And then he doesn't put us off. He tells us who ther or not he can help us and in the most cases he is ready to do anything in his power.

We don't have to go out of our town to see what Aberhart has done. As far as previous Governments went one would think that Redcliff was somewhere down in Ontario for all they ever did for us. But just look around you today, or some time you are driving down to the Hat. And we are sure more will be done because Doc has told us so, and he is a man of his word. What do we know of these Independents? Nothing of much account. They seem very popular with the bosses around town so if you and I are wise, we will take no chances on the likes of them. No Sir.

I am a married man with a small family, I can't afford to take any chances on any of these fellows who want to pay the full rate of interest. I am going to vote ROBINSON 1.

**IN A MATTER LIKE THIS, IT DOESN'T PAY TO
TAKE CHANCES.**

Sincerely yours
JOHN SMITH

Eggs in Denmark

New Danish regulations governing the sale, import and export of eggs, promulgated by the Danish Riksdag and made effective Feb. 9, 1940 in Denmark, the world's largest egg exporter until the war broke out, with Great Britain and Germany the first and second ranking customers respectively, should be of considerable interest to producers in Western Canada. In view of Danish efforts to maintain her supremacy in this market under great handicaps imposed by war conditions.

Denmark was the first country to put the stamp of nationality on each egg, and the government of that country states that the new regulations will produce "a still better quality of eggs, and thus continue to consolidate the good name of Danish eggs abroad."

The most important new regulation is that all who buy or receive eggs of second or lower quality for sale or distribution must in future, the producer or dealer a lower price than that paid for first quality eggs, and the dealer must offer the lower price back to the producer. "This under-price" is arrived at by making a deduction from the price of first quality eggs, and will be fixed by the Minister of Agriculture and Fisheries on the recommendation of an Egg Board appointed by him and consisting of a representative of the Government, a representative of the Danish Egg, etc., and delegates from exporting, producing and trading circles.

Any person buying eggs from producers or from others than producers for the purpose of re-selling them—the latter category not including retail sales—must notify the Government Control Service of such a special form; provided certain conditions are complied with, he will then be authorized by the Ministry, and only persons so authorized may engage in such trade. No producer may supply eggs for sale, and no authorized trader may receive eggs, unless on delivery each consignment bears such marks that the identity of the producer can be established by certificate.

Three Marking Methods

Three ways of marking are open:

- (a) Every egg which is received from the producer must be distinctly marked with a number allotted to the producer by the buyer, or
- (b) The eggs of every producer must be delivered in, or packed by the buyer in a box marked with the name and address of the producer, or a number allotted to the producer by the buyer, and no other eggs may be packed in the same box, or
- (c) On delivery, the eggs from each producer must be securely separated in the boxes from the eggs of other producers and must be accompanied by a special delivery document.

Each producer is held responsible that every egg he sells is of first quality unless he has marked it "second class," if he sells eggs for further distribution, however, he will generally not be held liable if he approves of the grading of the eggs made by the buyer.

No eggs may be received from a producer between the hours of 4 p.m. on Wednesday and 12 p.m. on Thursdays. The purpose of this regulation is to prevent speculation by the producer in a possible rise in the quotation, which is fixed every Thursday.

Eggs despatched to the packing stations must be placed in suitable boxes, and these boxes must be kept fresh and clean and be provided with lids. The packing material must be dry, clean, inodorous and in good condition. Boxes must be protected from rain and sun, and eggs must not be conveyed in vehicles together with goods which are odorous or in any way liable to transmit any smell or undesirable taste to them.

No fundamental changes have been made in the regulations regarding the exporting of eggs and the packing of eggs for export. As hitherto "Fresh Danish Eggs" for export must all be stamped with a mark represented by an oval enclosing the word "Danish." Under previous regulations Danish eggs of second quality could not be exported, and there is no slackening of this rule in the new regulations. The new order includes provisions as to the marking of the boxes used for making egg boxes, and the use of second-hand material is prohibited.

War Exigencies

"Fresh Danish Eggs," "Danish Chipped Eggs" and "Danish Cold-Hard Eggs" may be packed only in flats containing 720 eggs in two layers, or in boxes of 360 eggs. In the latter event the eggs must be placed on moulded trays of a pattern sanctioned by the Danish Government Control Service, or in tall cartons. The Danish government, however, admits that "the exigencies of war may make it necessary to give temporary dispensations from these rules."

Formerly there were no special regulations governing the sale of eggs in the Danish home market, but this has now been remedied by the new Act. In the wholesale and retail trade all eggs sold must be first class unless otherwise stated, and each egg is marked according to the prescribed manner. Furthermore, eggs must be sold by weight unless they are displayed for sale in distinctly named grades.

An Unusual Order

Pennsylvania Firm Making Rubber

Boots For Finnish War Horses

The Grove City Brass and Bronze Company, Grove City, Pa., announced it is making castings to fill an order for 4,000 rubber boots for horses in the Finnish Army. Company officials said the boots, first of their kind ever made, are to protect the animals from the corrosive gas that collects on battle grounds. The gas attacks the hooves, crippling the horses. The boots are 16 inches high, laid with rawhide.

Famous Fishing Rod

A fishing rod that once belonged to Joseph Turner, famous fish-landscapist painter, was bequeathed to the Royal Academy by Arthur N. Gille of Southampton, Eng.

At the Hebrew cemetery in Salinas, Greece, graves are left on the tombs of the dead as a mark of respect.

Vermont had the first normal school in the world.

Japan's Gold Reserve

Recent Survey Shows It Must Be Rapidly Nearing Exhaustion

A survey of Japan's financial and economic structure after the attack of 32 months of war in China indicates the Japanese will have serious difficulties in purchasing vitally needed industrial and war supplies abroad.

Japan's domestic economic and financial troubles are increasingly apparent. Its export trade is declining, and exhaustion of its gold reserve is approaching, with meagre opportunities to replenish its war chest.

Importation of an embargo on materials normally purchased in the United States such as cotton, scrap iron, oil, copper and wood pulp would accelerate the critical economic problem abroad for Japan. Japanese purchases from the United States in 1939 were more than \$200,000,000.

Japan has paid for its American purchases by shipping gold bars valued at \$278,530,000 since the outbreak of the undeclared Sino-Japanese war and, in view of Japan's known gold reserves, economists are pointed already as to where it will dig up sufficient gold in the immediate future to pay for vitally needed materials for war.

Japan's financial manoeuvres and the secrecy imposed on gold production and shipments since June 1939 have made an estimation of its gold reserves a guessing game with many unknown factors providing wide margins for error.

Taking Nursing Course

Princess Elizabeth To Add This To Her Other Studies

Princess Elizabeth's education was the subject of many family conferences during the Christmas holidays, reports the London Daily Sketch, which states that the princess herself is eager to take up nursing—just as the Princess Royal did when she was about the same age during the last war. Queen Mary—a firm believer in efficient training for women—added her persuasion, and it has now been decided that a course in hospital duties will be added to Princess Elizabeth's curriculum in the near future. Both Princesses have taken a keen interest in comforts for the troops, and behind the scenes they have contributed generously to the collections of clothing and other things sent to the various depots. At first, their only active help in making of comforts was confined to knitting, but Princess Margaret especially has been anxious to try more ambitious creations, and to her great delight, a sewing machine was among the presents she received at Christmas. She spends some time each day learning to use it.

Hard Both Ways

Conversation Difficult With Faltering English And Bad French

Leonard Lyon, in the New York Post tell this story: Perce Molnar, the Hungarian playwright, took a newly-arrived friend to the Marlborough-Nichols and found a suitable room for him. Molnar, when he was asked to speak English, was brought to the lady in charge of reservations. She was his faltering English and she said, "I can speak French as well as that, so we'll talk in French," and started to converse in unintelligible, first-grade French. "One moment, please," Molnar interrupted. "I speak English as well as that. So we'll talk in English."

Just in Reverse

With scarcely a sound the leuciside car pulled up before the seaside hotel and an old, grey-haired man descended.

"My doctor advises me to stay where the north wind blows continually," he remarked to the manager. "Does it blow here?"

"It does, sir," returned the other. "You are very fortunate to have stopped at exactly the right hotel. The south wind always blows here."

The old man took a moistened finger to his forehead.

"Always?" he repeated. "Are you sure?" "It appears to be coming from the north just now, sir."

"You're right, sir. It's on its way back!"

A radium, to worth about \$25,000 a gram, and the entire world's available stock amounts to 700 grams, or about 24 ounces.

A new doorless telephone booth for hotel places another noise by a thick mineral wool lining.

STORY BY DODD

Sh. Sells, of duplicate series 1120 second hand

Trained Airmen

Late Lord Tweedsmuir Said Great Possibilities in Our Air Effort

Canada's tremendous wartime air effort will place her in the very forefront of aeronautical development after the war and will supply her with a potentially great peace-time asset of a large body of trained airmen, Lord Tweedsmuir predicted in one of his last writings before his death.

This forecast is contained in an address the late Governor-General gave before the annual banquet of the Boy Scouts of Canada at Toronto. Lord Tweedsmuir suggested that the Scout training more closely with the practical problems which are facing the growing youth of the Dominion.

"We are giving our Scouts an admirable moral and physical discipline which is the true basis for a worthy and successful life," Lord Tweedsmuir wrote. "You cannot put the value of that too high."

"The problems of youth are more difficult to-day than ever before and they are not going to be easier in the war is over. Cannot we, while these boys are in our charge, do more by advice and training to see that when they enter a grown-up world, they have a reasonable chance. Cannot we, while keeping in the forefront our moral and spiritual ideals, take pains to see that our Scouts, when they enter adult life, are not only capable of reaping the fruit of their training, and shall not get into the wrong grooves, or into blind alleys which lead to a dead wall?"

Skipper Keep Cool

Refused To Be Scared By Attack Of German Fish

Lowestoft, offers one of her trawler skippers as the world's No. 1 "cool" man.

The trawler Scamundham steamed into port with a load of fish and the story of being repeatedly attacked by a machine-gunning German plane. The crew continued fishing.

"We mustn't let them gase us," their skipper told them.

Old Shop Sold

Layton's, at Windsor, England, a confectioner's known to Canadians everywhere, and owned by the Layton family for four generations, is to be sold. The store has held its royal warrant nearly 200 years, and is an Elton tuckshop.

The world's most tattooed man probably was Constantine, the Greek king, who had 388 designs upon his body.

The swordfish is the unofficial speed champion of all fishes, but it has never been successful in timing it.

Feathers evolved from the scales of birds' ancestors, reptilian ancestors, according to some scientists.

Gregor Mendel discovered the law of heredity in the human race by crossing varieties of garden peas.

The world's worst weather is claimed for the Antarctic—the home of the blizzard.

The Customer Is Always Right!

Success Of Registered And Certified Seeds Had In Customer Fidelity

For years, the customers of grocery, drug and seed stores have asked for seeds that would grow vegetables that looked like the ones on the packets.

"They might have said, 'Surely with all the experts that the government has the universities and the seed should be able to buy seeds that would grow vegetables that would be the same—the exact kind we wanted. We should be able to get fresh seed—seeds that would grow. We should be able to get Canadian seeds—that would suit this country.' Strangely enough, that's just exactly what the Department of Agriculture has been talking about for years."

The market gardeners, of course, can buy Government graded vegetable seeds; they can have the germination tests results. They know how many out of every strain every plant will be. They get seeds that are absolutely free from weeds. They get Registered and Certified seeds. But until last year, these high grade inspected seeds were not available to the public in the little seed packets.

Last year, for the first time in history, the registered and certified seeds were offered to Mrs. Housewife and her children. The Government, in the co-operation of a large grocery chain organization. This year, after the success of the move, the Government adopted an official packet, and now only the official packets can be used for these seeds. The seeds are all grown in Canada, and are inspected and field-tested in the presence of a Government official and the purity of the strains is type and standard. The Canadian standards set by the Department are the same as the standards of the United States and the Canadian Co-Operative of Arma appears on the packet.

"We always wondered what these high grade seeds meant when they said, 'The Customer Is Always Right.' The success of Registered and Certified Seeds in customer packets is one good example."

Trouble Is With Them

Germany Cannot Continue To Throw Blame On Other Nations

A people cannot go on forever blaming its enemies. In Frederick's time and Bismarck's time the enemy was France. In William II's time and Hitler's time the enemy is Great Britain. The question is bound to arise whether the real foe of German nationhood is not Germany itself—the eternal German soldierism which can break through and annihilate and outflank, overrun and stamp down and crush, but which cannot find a national way of life—New York Times.

Anxious To Beat Record

England's Lord Chief Justice Alan At Serving Longest Period

Lord Hewart, England's Lord Chief Justice, who was 70 the other day, is nearing the record as L.C.J., having held the post for nearly 18 years. That is the longest period during this century and nearly the longest in the 19th century. Lord Justice, the record-holder, held the post for 21 years, and Lord Hewart wants to beat this, it is reported.

Starfish destroy and eat enough oysters in Long Island Sound alone to cost oyster fishermen \$700,000.

Add My Praise to Your Grand Tasting Syrup

Bee Hive Syrup

Would Be Rich Prize

But Nazis Know Attack On Sweden Might Be Disastrous

Sweden would be a rich prize. She is the world's greatest exporter of iron ore. Swedish Lapland, above the Arctic Circle, is said to possess two billion tons of high-grade ore, much of it available through strip-mining.

Germany gets more than half of her iron-ore imports from Sweden. If that source were cut off, German arm factories would shrivel up.

Therein lies not only a danger to Sweden, but a safeguard. For if Germany were to throw a blitzkrieg at Sweden, and the blitzkrieg didn't take, the lifeline of the Reich's foundries would be smashed. Sweden has a substantial army, and would certainly get prompt help from England for the asking. Hitler, knowing all that, would presumably consider his attraction of Sweden a risky attack—New York Times-Telegram.

Leather Gloves

Slakes Fur Manufacturer Come From Farms of Canada

In the manufacture of 523,802 dozen pair of leather gloves, the leather glove and mitten industry of Canada in 1938, for which the latest details have just been published, used 5,675,647 square feet of cowhide, 3,425,998 of sheepskin, 1,125,220 of horsehide, 4,171,817 of muleskin, 679,683 of goatskin, 281,751 of pigskin, 85,410 of deerskin, 72,014 of lambskin, and 54,483 of other kinds of skins. In addition 361,370 worth of spits (various kinds of leather) and 428,850 of other supplies were included in the manufacture. The total cost of materials used amounted to \$2,651,460.

The amount of cheques cashed in the clearing house centres of Canada during 1938 aggregated \$1,614,000, 50.81 compared with \$20,924,362, 732 in 1938, a gain of \$69,948,009.

If we don't enjoy what we've got now, we won't be a bit happier when we get more.

Look For Increased Farm Efficiency From Intensive Educational Campaign

Increased efficiency on the farm is aimed at by Manitoba warblers committee on agriculture through an intensive farm educational campaign in this year.

This campaign, to be conducted through every medium, press, radio and lecture, is designed specifically to assist agriculture to carry out its national obligations in wartime and to help the farmer make the most efficient use of the farm resources in his own interest as well, by stimulating use of improved methods of production and marketing. It is also expected that the farmer will be placed in better position to withstand the re-adjustments anticipated in the post-war period.

This committee, intended to pool the experience of the best agricultural men in Manitoba, is composed of representatives of the government of the Manitoba Federation of Agriculture (made up of a variety of farm organizations), of the Grain Exchange and similar bodies.

The committee's program consists basically of the stimulation of ordinary peacetime farm activities. For instance, it will work for intensified drought prevention, keeping feed on the farm, guarding against crop failures by diversification and other means, improved breeding of stock, reduction of wastage such as badly-balanced feeding and the culling of poor animals, less over-consumption of feed and consequent depression, encouragement will be given to implement purchases through co-operative organizations by which it is hoped they may obtain such machinery at cash prices instead of the usual two or three years' installment period.

To help the farmers replace inefficient implements worn out during the 10 years of western agricultural depression, encouragement will be given to implement purchases through co-operative organizations by which it is hoped they may obtain such machinery at cash prices instead of the usual two or three years' installment period.

Particular importance is placed on this implements aspect, because wartime means greater dependence on machinery as men are drawn from the farms.

It is estimated that a backlog of implement needs amounting to \$100,000,000 or \$150,000,000 has accumulated since 1930, much of which must be replaced if western agriculture is to be placed on an efficient basis again. Incidentally the farmer will be given instruction on the proper handling and maintenance of this equipment.

Since adequate food supplies are a prime requisite of war, the committee considers that the war impinges directly on western Canada and especially on the good areas in western Canada, into which much of Manitoba falls by climate and variety of produce.

A somewhat similar program is being organized in Saskatchewan at the moment.

A Strange Request

Money Left By Norwegian Will Be Hard To Distribute

To compensate for misfortune resulting from his father's business failure, a noted construction engineer bequeathed \$150,000 to improve the cultural life of a black Norwegian fishing village.

The unusual bequest was disclosed at Philadelphia in the will of the late Henrik Von Zerkow, native of Norway, who lived in Philadelphia more than half a century but never became a United States citizen. He died June 28, 1938, at the age of 77, while on one of his annual visits to his homeland.

The will relates that during the engineer's childhood several citizens of Christendom, his birthplace, preferred "cafes" to the failure of his father's business.

Von Zerkow wrote that he would like to repay the losses or their descendants but had no way of knowing who they are or how much they lost.

Sent To Guard House

British Soldier's Imitation Of Air Raid Siren Was Too Real

A British soldier who attempted to imitate the "warning note" of an air-raid siren in the guard house for an indefinite period.

The soldier, who has what is described as an "unusual talent" for mimicking bird and animal sounds, and express train, attempted for the first time recently the British raid warning signal. Troops sprang immediately to action stations, anti-aircraft guns were manned, and a conveyance dashed off to guard a nearby town.

Animal Nutrition Chinko Winds

Discovery Of The Special Values In Young Fowls Having Marked

In the nutrition of domestic animals, chemistry and physiology have made great advances, observed Dr. J. M. Swaine, Director, Science Service, Dominion Department of Agriculture, in a recent address to the Royal Society of Canada. With nutrition, as well as with disease, researches on animals and man are closely linked. The discovery of the special values in young fowls is having a marked effect in live stock feeding. When properly prepared from young plants, hay contains minerals, proteins, and vitamins in concentrated form. Grass and legumes cut in the young and rapidly growing stage, properly dried and ensiled so as to preserve the carotene content, are now used extensively in live stock feeding.

The poorer classes of the Finnish population receive a large part of their vitamin supply in the winter time from milk, of which they consume relatively large quantities, states a recent report. The vitamin content of the winter milk was found to be only about one-third as high as that of summer milk, which cows were fed in the ordinary way. Finnish bio-chemists worked out the following procedure: Clover and lucerne, which could be frequently cropped, were cut in the green stage and ensiled in a special way so that the carotene content was largely retained, and when this ensilage was fed to cows it was found that even in winter the vitamin A content of the milk was as high as in summer milk; sufficient, that is to say, to provide the human requirement in quantities of milk that could ordinarily be purchased and used.

When transmitted by radio, sound takes the speed of electric waves, 186,000 miles per second, instead of its natural speed of about 12 miles per second.

But sugar was being grown by 40,000 farmers in Britain before the war on 350,000 acres.

Sugar planters and labor unions of Jamaica have agreed to arbitrate future disputes.

AS THE YANKEES OPENED SPRING TRAINING

Manager Joe McCarthy, left, gives his players a pep talk at St. Petersburg, Fla., as the New York Yankees open their Spring training season. Pitchers and catchers were the first to report.

Swiss Ski Instructor Says Warm Breasts Caused By Friction

The theory that the Pacific Japanese current sends Chinook winds over the Rockies to warm southern Alberta, received a setback at Banff when Bruno Engler, Swiss ski instructor, said he thought friction caused by the passage of winds through narrow funnel-like mountain valleys accounts for the warm breezes.

Bruno said Alberta's Chinooks reminded him of similar winds in his native Switzerland. These winds, he said, are called "foehn" winds and are generally speaking, they moderate the Chinooks along the Continental Divide here.

Bruno, he said, do queer things in mountain ranges as high as the Rockies or the Alps. Sometimes they get literally trapped.

Winds blown into the entrance to canyons and ranges, find themselves blocked and begin to fight their way back. This, said Engler, sets up a friction and if you know your physics, you know that friction makes heat.

Prehistoric Battle

Scientists Have Been Misled By A Practical Joker

For more than half a century a stone axe-head buried in a 4,000-year-old animal skull has been accepted by visitors to the Bedford Museum at Cambridge as evidence of a prehistoric battle to the death.

But now Major Gordon Fowler, research worker, declares that scientists, students, lecturers and the public have been duped by a practical joker. While both axe-head and skull are authentic, he says they were found separately and the axe-head was placed in the skull as a joke.

Major Fowler declares that he knows who carried out the joke, but he cannot tell the whole story more than five years after the death of the man who perpetrated the hoax. He has been dead two years now.

To make 60 pounds of honey the bee community must travel about 28,000,000 miles, or more than a thousand times round the earth.

Wheat Rust Epidemics Are Being Banished By The Work Of Scientists

Scientific Sense Of Humor

Is Helping To Carry Them Through This War Of Nerves

Bilingual, in the Detroit Free Press says: A writer wonders if it is that there has been no stirring poem to come out of the present war, and reminds us of Kipling's verse, "For All We Have and Are". There was that matchless verse of Rupert Brooke:

"If I should die, think only this of me: That there's some corner of a foreign field

That there have been no poems this time to stir the soul of an empire. There must be a reason, for it is somewhat unique for an Anglo-Saxon people to go into war without even a rallying song with them.

To win a war by making fun of the enemy for self-protection. This being a war of nerves—and that "war" has been going on ever since Munich—the genius of the British is to make doubly sure that they do not lose.

It is their funny magazine "Punch" has never been funnier; and the newspapers, magazines and radio via which each other in provoking laughter.

To win a war by making fun of the enemy for self-protection. This being a war of nerves—and that "war" has been going on ever since Munich—the genius of the British is to make doubly sure that they do not lose.

It is their funny magazine "Punch" has never been funnier; and the newspapers, magazines and radio via which each other in provoking laughter.

The recent development of rust-resistant varieties of bread wheat is one of the most notable contributions to the war effort which has yet made to the industry of agriculture, states Dr. J. M. Swaine, Director, Science Service, Dominion Department of Agriculture.

Canada's cereal growers had produced remarkably fine varieties of common wheat such as Marquis and Howard, but they were all susceptible to injury or destruction by black stem rust. The spores of the rust fungus are swept up from the south by air currents when the young wheat is growing rapidly. In years when conditions are favourable, the infection sweeps over the eastern and northern prairies, causing the most appalling losses in the yield of the crop.

Extremely heavy losses occurred in the years 1904, 1910, 1923, 1927, 1933, and 1935. The losses from stem rust in 1910 alone were estimated at \$100,000,000. In 1935 about 55,000,000 bushels were lost as a result of rust.

Since 1920, however, 1929 cereal breeders and plant pathologists of Canada and the United States have been working together in the Rust Research Laboratory, Winnipeg, staffed by pathologists and cereal breeders of the Dominion Department of Agriculture.

Important work has also been done at the Dominion Experimental Farm, Brandon, Man., and at the University of Saskatchewan, Saskatoon. The work has been co-ordinated by two joint Canadian-American committees of the National Research Council and the Dominion Department of Agriculture.

The United States workers have produced a variety, "Tascher", resistant to black stem rust, which has been already widely distributed in the eastern part of the Canadian prairie.

The Dominion Rust Research Laboratory has selected two new rust-resistant varieties, "Renown" and "Regent", and the University of Saskatchewan has distributed another variety, "Aper", all of which are being multiplied and distributed as rapidly as possible. Other and possibly better producing strains are now being perfected. The new varieties will rapidly replace the old susceptible varieties over the area of the prairie, and the great losses from rust epidemics should soon cease to occur.

Hunt Sea Lions

Will Use Carcasses For Food On Fur Farms

The virtual freedom enjoyed by sea lions in the summer months may be at an end. The Dominion Department of Fisheries has sanctioned an experiment by a company catering for fur farm requirements which proposes to use sea lion carcasses as food for animals on fur farms.

Sea lions prey upon salmon runs and other fisheries and often cause serious destruction to fishing gear. A request to the department of fisheries, the Fisheries Department conducts an annual "lion hunt".

Under the new plan, fishermen will shoot lions and deliver the carcasses to centres where they can be iced. Then they will be sent to a factory where they will be frozen and preserved as food for the animals on fur farms.

Departmental officials will observe the experiment closely. If operations become intensive enough to threaten extermination of the sea lion herd, the new industry may be licensed.

Still Going Strong

Negro 100 Years Old Drives Car

And Does Day's Work

A car hailed in front of an automobile licence office at Indianapolis, a negro alighted and entered the building.

"Your name?" inquired Lawrence J. Secdon, office manager.

"Jerry Patterson."

"Age?"

"106."

That was too much for Secdon, but Patterson was prepared. He produced evidence. He obtained his first driver's license when he was 80.

After Patterson departed with his 1940 tags a reporter went to the place where the negro lived alone. A neighbor explained Patterson's absence.

"Oh, he's at work. He's helping a man pull up tree stumps."

The Cyads, a group of plants that lived millions of years ago, in the Jurassic period, are still represented to-day by several species.

THE REDCLIFF REVIEW, WEDNESDAY MARCH 20, 1940

Dr. Gershaw's Last
Word to Electors

Medicine Hat, Alberta,
March 18th, 1940.

The Editor, Redcliff Review,
REDCLIFF, Alta.

Dear Sir,

Having received numerous inquiries regarding agricultural legislation, I would appreciate the privilege of using the medium of your newspaper to communicate some of my views on this subject to the electors of this district.

Agriculture is the greatest Canadian industry and the people and the government are realizing that the farmer cannot and will not be content to produce new wealth at a loss. This loss means economic insecurity, hardship and debt for the primary producers.

Recently some 15 trade treaties have been made in an effort to get better markets and thus better prices for these products. The treaty with U.S.A. gave substantial reductions in duty on the following items going into that great country from Canada: cattle, dairy products, horses, hog products, grass seeds, maple products, vegetables, etc.

The duty on heavy cattle weighing over 700 pounds was reduced from 2 cents per pound to 2 cents and then to 1½ cents. The quota was 193,960 per year but not more than 61,320 could enter in any one quarter.

There was also a reduction of 50% in the duty on calves and dairy cows, and Canadian exports more than doubled as a result. This increased sale of cattle in U.S.A. resulted in increased price levels for all cattle sold in Canada. In 1935 the general average price was 3.70 cents per pound while in 1938 the figure was 4.36 cents per pound.

The duty on live poultry was reduced from 8 cents to four cents per pound and in 1935 the exports to U.S.A. were 35,010 birds while in 1938 308,172 birds were sold in that market.

The Agricultural Products Co-operative Marketing Act encourages farmers to market their products co-operatively. It applies to every product except wheat and the government will advance up to 80% of the average wholesale price over the preceding three years to assist in financing of initial payments.

The Wheat Board Amendment Act of 1939 provides that the government will guarantee 70 cents for No. 1 Northern at Fort William. This is too low and western members will continue to press for a higher figure. It is, however, the best figure that could be obtained and the West is urging the Minister to pay out the 8 or 10 cent surplus at seeding time instead of at the end of the crop year. This figure only applies to the first 5000 bushels. The Grain Futures Act puts the Winnipeg Grain Exchange under the supervision and control of the Board of Grain Commissioners.

Experience has taught prairie farmers that they are subject to periods of crop failure that they cannot prevent. The Prairie Farm Assistance Act is intended to aid farmers in these periods of distress. It is a step in the right direction although there has been much confusion in the administration of it this first year. Provision for a 1% levy on all grain marketed is in the Act.

The award paid under this Act will be exempt from the operation of any law relating to bankruptcy or insolvency or to garnishment or attachment. This means that the farmer, who qualifies will receive the payment in cash for his own use to purchase necessities for his family.

Under the Prairie Farm Rehabilitation Act over 2000 projects in this constituency have been approved. This means real homes with gardens, trees, poultry, etc.

These and similar acts add to the stability and comfort of home life on the farm and are examples of what can be done to bring about a better and brighter future for agriculture.

Sincerely

F. W. Gershaw

(continued from front page)
upon Mr. Adam Ziegler, campaign manager for Dr. Robinson, to introduce the Doctor.

Mr. Ziegler expressed satisfaction with the progress being made on behalf of the S.C. candidate in this constituency.

DR. J. L. ROBINSON

Dr. Robinson said the vital issue in this election is, "Shall the power of money rule or shall the power of the people rule?" He knew many red herrings could be drawn across the track to prove otherwise. He said "In general, the Press is the tool of the financial interests."

Dr. Robinson stated that since the people paid him, they had a right to know how much they are paying and said he had received for the 4½ years he had worked for this constituency \$11,015. He asked them to compare that amount with the \$20,467.75 which the Medicine Hat News had received during the last year the Liberals were in power at Edmonton, stating that the Redcliff Review had received for the same time, \$175. for Government printing because it happened to be Conservative in politics. Dr. Robinson claimed he had done more for that \$11,015 "for you people than the Medicine Hat News will ever do for you." He had no quarrel with the \$39,000 Dr. Gershaw had received in his last term as Federal member for this constituency, for he thought he probably earned it. Dr. Robinson said he made no apologies for the amount he had earned and received.

The Doctor claimed that the News was the mouthpiece of Dr. Gershaw and Mr. Yuill, and named the personnel of the shareholders and Board of Directors to substantiate his claim. After reading clippings from the News to show that their forecast for a nice quiet campaign had been violated by them he said he would rather lose this election than see his opponent sick or dead.

The Independents will turn into Liberals when they get into power, claimed Dr. Robinson. E. L. Gray was in turn a Unity candidate, then Liberal and now an Independent. "What will he be if and when elected?"

Speaking of the unpaid interest on Alberta bonds, Dr. Robinson said the B.C. Government if returned would pay what they could but if the Independents were successful they would pay the interest which would have to be taken out of the people by taxation. In his opinion men's and women's wages were of more importance than the wages of money.

The S. C. candidate said he had worked hard to get the Minimum Wage Act passed and if it had not been for him there would have been no close provision of one day's rest in seven. He said he had put more men and women to work than any industrialist has.

Dr. Robinson concluded his remarks by saying "The will of the people must prevail." If he is given their mandate to go back to Edmonton to work to that end he will do so and give them his best service 365 days of the year.

MR. A. H. MITCHELL

Mr. A. H. Mitchell, the S. C. candidate for the Dominion House dealt with the subjects, War, Money, Wheat and The Future.

In speaking of the War, Mr. Mitchell said it was not of our making, but since it is here we must win it in order to preserve our right to make the changes in our economic system so that we may survive against our home dictators. The Press had misrepresented the Social Credit

stand on conscription. "Our stand," said Mr. Mitchell, "if finances were conscripted there would be no need to conscript men."

In speaking of money, Mr. Mitchell stated that the Banking System of Canada controls the policy of the government, that Mr. B. Bennett admitted such to be the case.

Mr. Mitchell spoke of how the group of Social Creditors in the House of Commons is looking down the interests of the western provinces, citing among others their efforts to have the price of wheat from 80 cents to 95 cents in spite of their efforts, however, the price in 1940 would be 60 cents a bushel. While he was glad, he said, that the farmers of the west had benefited by the wheat bonus, much money had been wasted by the appointment of incompetent inspectors who were friends of the government but not qualified for the job.

Mr. Mitchell said if returned to power he would continue to work for the people of the west and bring about better conditions in the future.

(continued from front page)

Dr. Dixon said Social Credit was a jumble of meaningless words. That the Experts that had been imported, had been unable to put it into practice and one of them had drawn a jail sentence for a part he had played in this province.

W. D. GOW

Mr. Gow professed his remarks by saying it was a pity that our children should hear over the

radio language spoken by the Premier of this province which is unfit for children's ears.

This is a time of emergency and crisis, said Mr. Gow, and requires drastic action. In spite of ridicule from some quarters, Liberals and Conservatives were uniting throughout this province to meet the present emergency.

In speaking of Social Credit, Mr. Gow said he had been unable to find any comprehensive definition of the theory and has been forced to the conclusion that "there ain't no such animal". Mr. Gow said the Dominion Government had proffered help in the refunding of our bonded indebtedness but Mr. Aberhart had endeavored to antagonize the Senior Government, so they would throw obstacles in his way and thus he could shift the blame for his not putting Social Credit into operation.

Referring to the S. C. booklet, Mr. Gow pointed out several industries which had been started long before the present government went into office, but which the book claimed were new industries started since 1935.

DR. H. O. DIXON

Dr. Dixon said Social Credit was a jumble of meaningless words. That the Experts that had been imported, had been unable to put it into practice and one of them had drawn a jail sentence for a part he had played in this province.

In speaking of the heavy increase in taxes under the present government, Dr. Dixon cited the

case of a grocer in Medicine Hat who pays no fewer than 15 licenses at the present time.

Dr. Dixon spoke about school affairs, health and irrigation, saying that the first, owing to increased taxes and extension of curricula, it became steadily more difficult to carry on, that in the second, many of the statements made by the government in the S. C. booklet were untrue and others were misleading. He was willing to admit that this government had done something worthwhile in regard to T.B. but on the other hand, it had reduced the grants to hospitals and the number of travelling clinics.

In regard to irrigation, the Aberhart government was holding up any progress along this line, by lack of co-operation with the Federal Government.

The Doctor said he was willing to concede S.C. 20 seats in the next Legislature.

W. C. YUILL

Mr. W. C. Yuill, the Independent candidate, said he was born and reared in Medicine Hat, that he had been in the pottery business for the past twenty years, that he had no strings attached to him in any way, either politically or financially, but being convinced that the province is facing an emergency, he consented to stand for election on Thursday March 21.

Mr. Yuill said the only Dividends that had been paid by the present Provincial Government were to themselves and their - (continued to back page)

Shall I Vote for
KING or MANION?

There is only one decision to be made by the Canadian people on March 26th . . . It is this:

Shall our country's war effort be handed over to unknown, unnamed politicians . . . to a makeshift cabinet with Dr. Manion as the self-appointed leader? Or . . .

Shall our country's war effort be continued vigorously and faithfully by the known and proven administration of Mackenzie King?

That is the question YOU must answer.

Up a Blind Alley?—or—Out in the Open!

It is time for plain speaking. Dr. Manion's pretence of offering "national" government is sheer political deceit. Because: even if he were elected to office, Dr. Manion could not organize or lead a truly national government. The parliamentary group which might follow him would fail to represent all Canada. It would not represent the people of the national Liberal party. It would not represent the people of the C.C.F. party. It would not represent the people of the historic Conservative party which Dr. Manion has now scuttled.

Do not be deceived!
Dr. Manion cannot give you
National Government.

The best he might give you would be government by unknown followers. He invites you to follow him up a blind alley—to vote for a government of his own imagination—answerable to some undisclosed political group.

Mackenzie King offers you something entirely in the open . . . the most truly National government Canada has ever known. His parliamentary followers represent the people of every province in Canada—every section of our country—every economic, social and racial group. There is not an area of this country—not a single classification of our people—without proper representation in the Mackenzie King following.

Mackenzie King's cabinet ministers are well known to you. They are broadly experienced men, eager and able to continue the sort of administration which brought progress to Canada in times of peace and national pride to Canadians since the outbreak of war.

The Mackenzie King administration is answerable to the people of Canada—to no one else.

The Responsibility Is Now Yours

Canada is facing the greatest crisis in her history. It is YOUR responsibility to say how she is to deal with this crisis. Therefore: when you go to the polls on March 26th you should consider only what is best for Canada—what is best for the Empire and our allies—what is the sure, direct road to Victory and Peace.

FORWARD WITH

MACKENZIE KING

The National Liberal Federation of Canada, Ottawa, Ontario.

The British Tradition

Crozier Returns To English Shores
With Victory At Her Masthead

As H.M.S. Crozier, with victory at her mastheads and her funnels thick with smoke (one feels the hand of generosity stimulating reference to any other injuries), came up past Coward Bay, made her turn round Drake's Island under the eye of the cheering crowds on Plymouth Hoe and passed on to the Hammers to her pier at Devonport, long centuries of tradition looked down upon her. The Hoe is where Drake himself allegedly played at bowls that day when the Armada's toasts first lifted down the Channel; the other names have been lived into generations of British naval men in the hard way (it was a tricky turn around the island in the days of sail) and are indelibly associated with many brave departures and many triumphant returns. The Crozier, with the Ajax which arrived before her and the Achilles, still prominently in South American waters, has fulfilled the tradition once again; and reminded the world that the British Navy, for all its faults, is still there.

Her reappearance dispels the German legend that she was lying permanently disabled at the Falklands; perhaps it will tend to dispel another product of German propaganda, "The Walrus," which was a British Army military weekly, the other day had a handsome layout composed of photographs of British troops doing the job of fighting, and raiding along the Maginot line, side by side with British troops, and leading to entertainment in the football and similarly relaxing themselves. If the British have been not taking punishment, on the contrary, they have been taking and giving their full share at sea.

The Crozier saw her battle with the Graf Spee only dramatized it, ceasing dangers of patrol, the persons and discomforts of the mine-sweeping flotilla, and the fighting of the destroyer crew, several of which have already vanished in the death-strewn waters of the Atlantic. The heroism of the submarines—last matters lending themselves less easily to hand-painting and formal coloration, but all a part of the "silent pressure of sea power" which the men from Plymouth and Portsmouth and Bristol and the Thames were exercising long before Mahan ever wrote about it. It may be exaggerated, but it cannot help quelling the German's famous line again. "These far distant storm-beaten ships, upon which the Grand Army never looks, stand between it and the dominion of the world." The Crozier and her consorts, great and small, are their little descendants; another dictator with another great army may never look upon them, but he must know that they are there, all the time. —New York Herald Tribune.

Will Soon Be Published

Late Governor-General's Memoirs Show He Lived Living in Canada

The publishers of Lord Tweedsmuir's autobiography, have revealed that the late Governor-General wrote his memoirs that he lived in Canada during the period in which he lived in Canada. The autobiography, to be titled "Tiger's Way," will be published late in August. Sections of the book are expected to be released in the May, June and July issues of the Atlantic Monthly.

Ferris Greenleaf, vice-president of the publishing firm and a friend of Lord Tweedsmuir, stated that "very little" of the book deals with the years in which Lord Tweedsmuir was Governor-General of Canada. Mr. Greenleaf added that passages in the autobiography indicate that Lord Tweedsmuir enjoyed living in Canada very much.

Logie Of Benjamin Franklin
When Benjamin Franklin proposed, in May, 1787, that the sessions of the Constitutional Convention be opened with prayer, he was asked the reason for his request. "If a sparrow cannot fall without God's knowledge," replied the great philosopher-statement, "then can an empire rise without His aid?"

A Good Slogan
"The Navy's Hero" is a new catch phrase emanating from the Allmark episode. The St. Thomas Times-Journal recently began an addition to make the slogan read: "The Navy's Hero, There and Everywhere." It would seem so—and how!

Defying storm winds, a party of 28 ice-logged soldiers sent artificial trails recently climbed to the summit of Mount Fuji in Japan.

A lady in Tampa, Florida, is noted for her collection of valuable buttons. She has a collection of 60,000 buttons, valued at \$10,000.

BRITISH JACK TARS CATCH DIFFERENT KINDS OF FISH

Work on a British destroyer in times of war is very arduous, but it has its brighter moments. These British sailors dropped a couple of depth charges over the spot where they figured a German submarine lurked. They report they sunk the sub, but they know definitely they caught something because they landed several good-sized fish which had been stunned by the depth charges—a welcome addition to the destroyer's menu.

Most Unusual Figure

Commander Of New Zealand Force Has Always Been Fighter

When they finally get into action, the New Zealand expeditionary force, which is now in Egypt, leaps into the headlines by distinguishing itself in action, it will simply be an indication that it has caught the spirit of its leader, Brig-General Bernard Cuthbert Freyberg, one of the most unusual figures in British military history.

Almost since he got out of the cradle in London, where he was born 100 years ago, Gen. Freyberg has been a fighter. He campaigned with Carranza in Mexico, he won prizes as a professional swimmer, and, according to one story, he even picked up money in the prize ring in New York to help him get back to England in 1914 to join the "Contemptibles."

Just how well he conducted himself under fire is shown by the fact that he was wounded nine times, mentioned in dispatches on six occasions, and awarded the D.S.O. with two bars, the C.M.G., and finally was decorated with the Victoria Cross for his part in the battle of the Somme.

He remained in the army after the war with a peacetime reduction to the rank of major. He rose slowly until 1931 when he was made assistant quartermaster-general of the Southern Command. In 1933 he was placed on the general staff and was retired in 1937. The outbreak of war saw him back in action as chief of the staff of the New Zealand force in the Middle East.

Man Of Great Airsman

The custom of putting weather-cocks on ships is traced to the Greek Aeolus. Andronicus, of about 100 B.C., who built a tower of winds and mounted on it a brass device which twirled with wind.

Standardizing Clothing

Italy Is Considering Idea To Control Rise In Prices

Standard mail, shoes, underwear, stockings, cloth, and household linen for Italians have been approved in a resolution passed by the consultative committee of the Clothing Corporation. Their introduction, the resolution states, is rendered necessary by the continuous rise in prices, the control of which has been found difficult owing to the multiplicity of the articles affected.

Among the articles proposed are two types of standard shoes for men and women, various types of mixed textiles, a standard shirt and suit for men, and two types of stockings, one of cotton and the other of rayon, for women. The textiles will be made in a variety of colors and designs and must contain a certain percentage of artificial fibers.

The measure is welcomed in the press as being fully in consonance with the political and social policy of the Fascist regime. "Times," it pointed out, are hard and are likely to grow harder for all countries without exception; hence the necessity to look ahead and take every possible precaution.—London Times.

French Refuge For Poles

Large Area In Algeria Set Aside For Colonization

France has set aside a sunny tract in Algeria for 25,000 to 30,000 Poles who fled from Poland to neighboring southeastern countries to escape the German-Russian invasion.

The French government placed at the disposal of the Polish ministry of public assistance an area near Algiers, where soil and climate are favorable for colonization.

Silica fluff is said to be the world's lightest powder. It is one-fortieth as light as water.

Apple trees with branches which trail down to the ground have been developed in Russia.

Mentality Of Animals

Cannot Be Determined Although Some Show Marked Intelligence

London newspapers found it of sufficient interest the other day to report the case of a cat, yodel. Whiskers, no she was evidently not of patrician, highly cultivated stock which was bred from London to its old home in Doncaster, a distance of 170 miles, then realizing the family was no longer there, walked back again. Some people criticize cats as having no genuine affections but there have been just as many instances of cats as there have been of dogs, traveling long distances, suffering great hardships, to be reunited with the family. For as this cat was of its old home, it evidently placed the family ties first, thereby showing tremendous affection.

Cats and dogs, or some of them, show a marvelous "homing" instinct. They may be put in a box and carried by automobile or train, feeling nothing of the way when they came, yet they will walk back along strange roads, threading their path unerringly through busy cities. Yet there seems to be insuperable differences between their mental powers. Some cats and dogs will live in one home in a city for years, and then suddenly they are reported "lost."

They will wander miles or two from home and they cannot find their way back. Often they never do, and become strays or are adopted by somebody else.

Bees are credited with unerring instincts when gathering materials for honey. Yet according to the great French naturalist, Fabre, they are no so unerring that they have no other capacity whatever. If, after the bees go out in the morning, the hive is moved even a few inches to one side, they are bewildered when they return and cannot find the entrance.—St. Thomas Times-Journal.

May Reopen Pavilion

Great Britain Likely To Maintain Exhibit At New York Fair

It became practically certain that Great Britain would return next summer to the New York World's Fair, the Parliamentary Secretary for Overseas Trade saying in the House of Commons: "Certain financial arrangements have been suggested by the Fair authorities to ward covering the cost, and, subject to a satisfactory settlement of outstanding details, it has been decided to reopen the pavilion." For a while it was in doubt whether the British would come back since it would cost \$300,000 to maintain their exhibit, and they are pinching the pennies and pounds now that there's a war.

—New York Sun.

Interesting Admission

"The English," says Goering, "must realize the futility of economic warfare against the Reich." But, he added in the same speech, "during these last months Germany was not only and lacked necessary household articles, which did not help raise morale." An interesting admission.

It would seem, it would seem, the Ottawa Journal.

Not Afraid Of Work

British Air Minister's Secretary Begs Day At Early Hour

Sir Edward Campbell, M.P., is one of the earliest risers among the corps of parliamentary private secretaries. He serves Sir Kingsley Wood, the Air Minister, in this capacity, and always begins his work at 6:30 a.m., preparing urgent correspondence and a review of war news for his chief. Both Sir Kingsley and his parliamentary private secretary are at their desks at 9 a.m., and seldom finish before 11 p.m., and sometimes later. Sir Kingsley Wood's only hobby is golf.

Nothing Is Wasted
Aluminum milk bottle caps are being collected in London for use in armaments factories. There they are melted down as war material. So far over 80,000,000 caps have been collected in London alone.

There are 250 toll bridges in the U.S., used by half a million vehicles a day.

Appreciable amounts of cosmic rays can pass through 75 feet of lead.

May Be The Answer

Toronto Man Has Luminous Enamel For Use In Blackouts

In England the toll of deaths from traffic accidents during blackouts has been high. To provide a medium of "safe" illumination, and to make dark, some ideas tried by British troops from white painted stripes on helmets, stockings, to light-colored socks in walls, sidewalks, etc., carefully shaded so that rays of light would be cast horizontally but not upwards.

By far the most practical solution, however, is to use "black light." This is merely the popular name for long-wave ultra-violet radiation. It derives its name from the fact that the rays are invisible. Yet they can be reflected and re-directed and controlled just like rays of visible light. To make these rays useful, it is only necessary to coat objects that must be seen, with what is known as a "luminous enamel."

A Toronto man holds what he believes to be the answer to all previous objections to the use of "black light" during blackouts. G. B. Williams, who has a small laboratory, can give a convincing display of the use of "black light" and has developed a substance that may remove the objection to the use of a luminous enamel.

Mr. Williams has developed what is known as a "luminous enamel." This is a substance that can be painted on any object that can be painted. It can be painted on walls, roads, sidewalks, and even on clothing. It is a substance that can be painted on any object that can be painted.

If you were to pay a visit to Mr. Williams' laboratory, you would see a number of objects of being in a London blackout.

As you glance around after gazing at the light, you will see that all is not dark. The luminous enamel, which can be painted on any object that can be painted, is shining brightly. It is a substance that can be painted on any object that can be painted.

As you glance around after gazing at the light, you will see that all is not dark. The luminous enamel, which can be painted on any object that can be painted, is shining brightly. It is a substance that can be painted on any object that can be painted.

This map illustrates the progress of the Japanese army since they began the invasion of China proper, two and one-half years of war. The shaded area shows Chinese territory occupied by the Japanese forces.

The Chip and Fish Supper held by the Men of Gordon Memorial Church on Friday evening was well attended. The men in their white coats and hats looked quite "fitching" as they waited on guests, and demonstrated quite clearly that the Ladies Aid may take a well earned rest and leave everything to them (the men) in future.

Bedding Politicians in Redcliff

Redcliff may be justly proud of two of her young people who addressed the large audience assembled in Park Hall, Medicine Hat on Monday night to hear Mr. Yuill and others speak for the Independent platform.

Miss Lillian Leaning and Mr. Reggie Rose, who will cast their first vote tomorrow, March 21st, delivered brief addresses which made special appeal to the young people present, urging upon them the necessity and duty of shouldering their share of responsibility in bringing about better conditions for all. Both young people were roundly applauded at the conclusion of the launching of their political careers.

A number of the local P. T. girls went to Taber on Friday to take part in a demonstration and competition in P. T. work held there. The Taber girls were the winners.

The Men's P. T. Classes have been discontinued owing to lack of interest on the part of the Men themselves.

Among the Calgary Highlanders who were home on leave during the past week, were Ted Fairhurst, Gordon Newnam, George Kitchin, Bruce Collard, Ted Marshall, John Madson, Tom Kwamich, Mike Waskieski, Jack McPaden, Jim Dutton, Arthur and Ted Harris and John Rose.

Miss Kaja Madson, who has been attending the Youth Training School in Calgary, is visiting at her home here as the Youth Training School has been closed down for three weeks.

The local P. T. girls were entertained on Thursday evening at Medicine Hat by the P. T. Girls' Class there. After the usual P. T. workout, a pleasant social evening was enjoyed.

SOUTHERN ALBERTA FINNISH AID COMMITTEE

An organization has been formed under the above title with the purpose of assisting the Finns financially in their present struggle.

Mr. N. Luna, Redcliff, has been appointed the representative for this district.

The Committee has been formed to give everyone the privilege, because it is felt it is a privilege, to assist this valiant nation in its present dire straits.

No house-to-house canvass will be made in Redcliff, but those desiring to contribute are kindly asked to send donations to Mr. N. Luna, Redcliff. No matter how small your contributions will be gratefully accepted.

Another Band Concert was held in the Cameo Theatre on Sunday evening and was greatly enjoyed by the good crowd that attended.

Hodges the full band numbers, vocal solos were rendered by Mr. T. Balmer and Mr. Mellors, a saxophone solo by Mr. Pinder and an Hawaiian guitar duet by Mr. H. Turner and Mr. Gadesky.

(continued from editorial page)

friends. Money has been wasted. Expenses of Government are higher today than ever before. If this keeps on this province will end in bankruptcy.

Mr. Yuill said if the present Government would cooperate with the Federal, all brick plants in Redcliff would be running to capacity.

He said Medicine Hat had been brought back almost free of debt after its orgy of spending in the boom days, by good business management. The same could be done in provincial affairs, Mr. Yuill said.

In speaking of Rehabilitating Soldiers, he said machinery for this purpose should be put in operation now, to be ready for the men on their return.

Mr. Yuill said there had been no change in the Female Wage Laws since 1917 and that workers now pay 3 cents under compensation act as against 1 cent formerly.

GORDON MEMORIAL 10:00 A.M.—Sunday School

There will be a Service on Good Friday at 11 A.M.

BIRTHS

JOHNSON.—Born at Medicine Hat Maternity Hospital on Sunday March 17th, 1940, to Mr and Mrs. R. O. Johnson, a son.

McGIMPSEY.—Born at Medicine Hat Maternity Hospital on Friday March 15th, 1940, to Mr and Mrs. A. H. McGimpsey, a son.

Jones.—Born at Medicine Hat Maternity Hospital, on Sunday, March 17th, 1940, to Mr and Mrs. Thos. Jones of Redcliff—a daughter.

Speaking of old age pensions Mr. Yuill cited two cases in Medicine Hat where old pensioners had received some help from friends to augment their small pensions, and their pensions had been cut off.

Mr. Yuill thought there should be a proper set-up of Civil servants and that the Board of Appeal should consist of more than one man as at present.

"In closing Mr. Yuill said 'If I am elected, I will do my best for this constituency and the province'."

J. R. DAVIDSON

Mr. J. R. Davidson in his opening remarks eulogized Mr. Yuill. He said the common man pays the taxes in the final analysis. He pointed out that the dividends of 5 to 7 dollars a month which are claimed to be being earned by buyers of Alberta products, would need to have incomes of at least \$350 a month.

A few questions were asked before the meeting closed and were answered by Mr. Yuill or his colleagues. When asked to state his platform, Mr. Yuill said "I stand for a return of sane and sensible government so that we can look the world in the face, and not be ashamed."

The Red Cross Work Committee will meet in the Town Hall, on Tuesday afternoon March 26th.

The Hicks Trading Co.'s window is attracting considerable attention these days. A bag of salt and a chunk of common coal are shown as the ingredients which have gone into the manufacture of a material known as Elast-Glass, from which suspenders, garters and belts are made. It appears that salt and coal, when subjected to intense heat, form a gas. This gas is converted into liquid, cooled and rolled out under severe pressure to the desired thickness and width from which all products of Elast-Glass are made, including the suspenders, garters and belts sold by the Hicks Trading Co.
